ALYESKA AND TAPS
Alyeska Pipeline Service Company was formed in 1970 to design, build, maintain and operate the Trans Alaska Pipeline System (TAPS). The pipeline is recognized as a landmark engineering feat and remains essential to Alaska’s economy and central to the state’s industry. TAPS remains a living testament to the powerful Alaska spirit that has written our state’s history and is fueling Alaska’s future.

ALASKA NATIVE UTILIZATION AGREEMENT
Alyeska’s commitment to the Alaska Native community helped pave the way for the construction of TAPS. As defined in Section 29 of the Federal Agreement and Grant of Right-of-Way, the Alaska Native Utilization Agreement (ANUA) between Alyeska and the U.S. Department of Interior is intended to provide Alaska Natives with employment, training and development opportunities on TAPS as a result of building TAPS through Alaska Native lands.

The renewal of ANUA in 2007 secured Alyeska’s commitment into perpetuity to ensure Alaska’s Indigenous people will continue to benefit from the economic opportunities afforded by TAPS. Alyeska continues to honor this commitment through stewardship of the Alaska Native Program.

Today, about 750 people are employed by Alyeska, and hundreds of contractors work along TAPS at any given time. More than 95 percent of Alyeska’s workforce lives in Alaska; about 20 percent are Alaska Native; and 70 percent of TAPS contractor companies are based in Alaska.

This guide provides general information about Alyeska’s largest contractors, all of which have programs in place that focus on recruiting and training a diverse workforce for jobs on TAPS. Individuals who are interested in working on TAPS can contact the contractors directly to inquire about the various positions and current job openings.
AHTNA CONSTRUCTION

Ahtna Construction currently performs civil maintenance projects, mainline pipe repair activities and oil spill response on TAPS.

The services range the entire length of the 800-mile pipe from Prudhoe Bay to Valdez and present very unique hazards and challenges due to location, weather, and agency oversight. The challenging work environment with its varied terrain and changing environmental conditions means that creating a safe work environment is the highest priority at Ahtna Construction.

HOUSTON CONTRACTING COMPANY (HCC)  
AND ASRC ENERGY SERVICES (AES)

HCC is a subsidiary of AES and offers maintenance services that include oil and gas pipelines in-process and transportation facilities. HCC has provided pipeline and process facility maintenance for more than 20 years, including maintenance services for the 800-mile pipeline, the Valdez Marine Terminal, and the extensive equipment fleet used for maintaining TAPS. The work includes conducting major repairs to the crude oil tanks and oil loading berths, repairs to and replacement of corroded large bore mainline pipe and valve components, and upgrades to complex electrical, communications, and mechanical systems. HCC also provides complete materials logistics, Operator Qualification (OQ) training, and human resources to meet Federal regulations, as well as oil spill contingency response teams.

HCC’s fleet includes heavy construction equipment and specialized pipeline equipment. The HCC equipment maintenance shop in Fairbanks has previously received the coveted Fleet Masters Award, recognizing efficiency and innovation in maintaining more than 1,500 pieces of equipment for Alyeska.

ALASKA VENTURES, LLC

Alaska Ventures, LLC provides marine services in Valdez, Alaska. Alaska Ventures personnel and vessels help protect the environment through a contract with Alyeska Pipeline Service Company’s Ship Escort/Response Vessel System (SERVS). As part of this commercial partnership, Alaska Ventures provides tug escorts for tankers traveling through Prince William Sound (PWS) to and from the Valdez Marine Terminal, assuring safe passage even under the most extreme winter weather conditions. Alaska Ventures also provides secure docking and undocking operations at the oil product loading terminals.

To maintain a constant state of readiness, Alaska Ventures’ personnel participate in various drills and exercises to practice spill response tactics. Oil spill response equipment and crews are also staged in key areas around PWS.
