## Innovation: New In Line Inspection (ILI) Tool

When the Terminal's crude oil relief piping was due for integrity inspection in 2022, the ILI sub-team used a more innovative tool for improved accuracy, efficiency, safety, and cost-savings. With its ultrasonic testing technology and wall measurement capabilities, the tool found external wall loss that previous tools may have missed; it also saved Alyeska from conducting man entry inspection. Its effectiveness will optimize VMT inspections and help better inspect other TAPS areas.
